Lista de Figuras	xiii
Preface	xvii
<b>CHAPTER 1 ■ Introduction</b>	<b>1</b>
1.1 CAMERA CALIBRATION	1
1.2 HISTORICAL OVERVIEW OF TRACKING	2
1.3 GLOBAL ILLUMINATION	3
1.4 IMAGE-BASED LIGHTING	4
1.5 MATHEMATICAL NOTATIONS	4
1.6 PROJECTIVE GEOMETRY CONCEPTS	5
1.6.1 Projective Space	5
1.6.2 Projective Transforms	5
1.6.3 Projective Geometry on this book	6
1.6.4 Parallelism and Ideal Points	7
1.7 ABOUT THE CODE	8
<b>CHAPTER 2 ■ Virtual Camera</b>	<b>11</b>
2.1 BASIC MODEL	12
2.1.1 Camera in the origin	12
2.1.2 Camera in generic position	13
2.1.3 Digital Camera	13
2.1.4 Intrinsic parameters	13
2.1.5 Dimension of the space of virtual cameras	13
2.2 CAMERA FOR IMAGE SYNTHESIS	14
2.2.1 Terminologies	14
2.2.2 Clipping and visibility	14
2.3 TRANSFORMATION OF VISUALIZATION	15

2.3.1	Positioning the camera	15
2.3.2	Transformation of normalization	16
2.3.3	Perspective projection	16
2.3.4	Device coordinates	16
2.4	<b>COMPARISON WITH THE BASIC MODEL</b>	<b>17</b>
2.4.1	Intrinsic parameters	17
2.4.2	Dimension	18
2.4.3	Advantages over the basic model	18
2.5	<b>CAMERA FOR PATH TRACING</b>	<b>18</b>
2.6	<b>VISIBILITY AND RAY CASTING</b>	<b>18</b>
2.7	<b>CAMERAS FOR CALIBRATION</b>	<b>19</b>
2.7.1	Projective model	19
2.7.2	Projective Notation for Cameras	20
2.7.3	Generic projective camera	20
2.8	<b>MAPPING A CALIBRATED CAMERA INTO THE S3D LIBRARY</b>	<b>21</b>
2.8.1	Specification of extrinsic parameters	21
2.8.2	Specification of intrinsic parameters	21
2.9	<b>API</b>	<b>22</b>
2.9.1	MatchMove Software functions	22
2.9.2	Render Software functions	23
2.10	<b>CODE</b>	<b>24</b>
2.10.1	Code in the MatchMove Software	24
2.10.2	Code in the Render Software	25
<b>CHAPTER</b>	<b>3 ■ Optimization Tools</b>	<b>29</b>
3.1	<b>MINIMIZE A FUNCTION DEFINED ON AN INTERVAL</b>	<b>29</b>
3.2	<b>LEAST SQUARES</b>	<b>31</b>
3.3	<b>NON-LINEAR LEAST SQUARES</b>	<b>32</b>
3.3.1	Gauss-Newton method	32
3.3.2	Levenberg-Marquardt algorithm	33
3.4	<b>MINIMIZE THE NORM OF A LINEAR FUNCTION OVER A SPHERE</b>	<b>33</b>
3.5	<b>TWO STAGES OPTIMIZATION</b>	<b>34</b>
3.6	<b>ROBUST MODEL ESTIMATION</b>	<b>35</b>
3.6.1	RANSAC algorithm	35
3.6.2	Example of using the RANSAC algorithm	35

<b>CHAPTER 4 ■ Estimating one camera</b>	<b>37</b>
4.1 CALIBRATION IN RELATION TO A SET OF 3D POINTS	37
4.1.1 Calibration using six matches	37
4.1.2 Calibration using more than six matches	38
4.2 NORMALIZATION OF THE POINTS	38
4.3 ISOLATION OF CAMERA PARAMETERS	38
4.4 CAMERA FOR IMAGE SYNTHESIS	41
4.5 CALIBRATION BY RESTRICTED OPTIMIZATION	41
4.5.1 Adjusting the Levenberg-Marquardt to the problem	42
4.5.2 Parameterization of rotations	43
4.5.3 Parameterization of the camera space	43
4.6 PROBLEM POINTS OF PARAMETERIZATION	44
4.7 FINDING THE INTRINSIC PARAMETERS	44
4.8 CALIBRATION USING A PLANAR PATTERN	44
4.9 API	48
4.10 CODE	50
4.11 SINGLE CAMERA CALIBRATION PROGRAM	59
4.12 SIX POINTS SINGLE CAMERA CALIBRATION PROGRAM	61
<b>CHAPTER 5 ■ Estimating two cameras</b>	<b>63</b>
5.1 REPRESENTATION OF RELATIVE POSITIONING	63
5.2 RIGID MOVEMENT	64
5.3 OTHER PROJECTIVE MODEL	64
5.4 EPIPOLAR GEOMETRY	64
5.4.1 Essential matrix	64
5.5 FUNDAMENTAL MATRIX	65
5.6 THE 8-POINTS ALGORITHM	65
5.6.1 Calculation of $F$	66
5.6.2 Using more than 8 points	66
5.6.3 Calculation of $\tilde{F}$	66
5.7 NORMALIZED 8-POINTS ALGORITHM	67
5.8 FINDING THE EXTRINSIC PARAMETERS	67
5.8.1 Adding clipping to the model	68
5.8.2 Three-dimensional reconstruction	69
5.9 API	69

5.10	CODE	72
<b>CHAPTER</b>	<b>6 ■ Feature Tracking</b>	<b>79</b>
6.1	DEFINITIONS	79
6.2	KANADE-LUCAS-TOMASI ALGORITHM	79
6.3	FOLLOWING WINDOWS	80
6.4	CHOOSING THE WINDOWS	81
6.5	DISPOSAL OF WINDOWS	81
6.6	PROBLEMS USING KLT	81
6.7	CODE	82
<b>CHAPTER</b>	<b>7 ■ Estimating many cameras</b>	<b>85</b>
7.1	DEFINITIONS	85
7.2	CALIBRATING IN PAIRS	86
7.3	CALIBRATION IN THREE STEPS	86
7.4	THREE-STEP CALIBRATION PROBLEMS	87
7.5	MAKING THE CALIBRATION OF SMALL SEQUENCES ROBUST	87
7.5.1	Solution to the problem of Step 1	88
7.5.2	Solution to the problem of Step 2	88
7.5.3	Solution to the problem in Step 3	89
7.6	CHOICE OF BASE COLUMNS	89
7.7	BUNDLE ADJUSTMENT	89
7.8	REPRESENTATION OF A CONFIGURATION	90
7.9	REFINEMENT CYCLES	90
7.10	EXAMPLE	91
7.11	DECOMPOSITION OF THE VIDEO INTO FRAGMENTS	92
7.12	JUNCTION OF FRAGMENTS	93
7.12.1	Alignment of fragments	93
7.12.2	Compatibility of scales	93
7.12.3	Robust scale compatibility	94
7.13	OFF-LINE AUGMENTED REALITY	95
7.14	GLOBAL OPTIMIZATION BY RELAXATION	95
7.15	CODE MODULES	97
7.15.1	Bundle Adjustment API	97
7.15.2	Bundle Adjustment Code	99

7.15.3	RANSAC API	103
7.15.4	RANSAC Code	104
7.15.5	Features List API	110
7.15.6	Features List Code	112
7.15.7	Sequence of Frames API	116
7.15.8	Sequence of Frames Code	119
7.15.9	Relaxation API	136
7.15.10	Relaxation Code	139
7.16	MATCHMOVE PROGRAM	150
7.17	RELAXATION PROGRAM	151
<b>CHAPTER</b>	<b>8 ■ Modeling Tool</b>	<b>155</b>
<hr/>		
8.1	API	155
8.2	CODE	156
8.3	POINT CLOUD DEFINER PROGRAM	161
8.4	POINT CLOUD CALIB PROGRAM	164
<b>CHAPTER</b>	<b>9 ■ Light Transport and Monte Carlo</b>	<b>167</b>
<hr/>		
9.1	RADIANCE	167
9.2	THE INVARIANCE OF THE RADIANCE	169
9.3	THE BRDF AND THE RENDERING EQUATION	169
9.4	OTHER DEFINITION FOR THE RENDERING EQUATION	170
9.5	EXAMPLES OF BRDF	171
9.5.1	The perfect lambertian surface BRDF	171
9.5.2	The perfect mirror BRDF	171
9.5.3	The Modified Blinn-Phong's BRDF	171
9.6	NUMERICAL APPROXIMATION	172
9.7	MONTE CARLO INTEGRATION METHOD	172
9.8	PATH TRACING	173
9.9	UNIFORM SAMPLING OVER A HEMISPHERE	174
9.10	SPLITTING THE DIRECT AND INDIRECT ILLUMINATION	174
9.11	POLYGONAL LUMINARIES	176
9.12	CODE MODULES	177
9.12.1	Path Tracing API	177
9.12.2	Path Tracing Code	178

**xii ■ Contents**

9.12.3	Poly Light API	181
9.12.4	Poly Light Code	182
9.13	RENDERING PROGRAM	185
9.14	RESULT	187
<b>CHAPTER 10</b>	<b>Image Based Lighting</b>	<b>189</b>
<hr/>		
10.1	HDR PICTURES	189
10.2	RECONSTRUCTING THE HDR RADIANCE MAP	189
10.3	COLORED PICTURES	191
10.4	RECOVERING AN HDR RADIANCE MAP	191
10.5	THE PFM FILE FORMAT	191
10.6	CONVERSIONS BETWEEN LDR AND HDR IMAGES	192
10.7	FROM HDR PICTURES TO EQUIRECTANGULAR PROJECTIONS	192
10.8	ORIENTING THE RADIANCE DOME	194
10.9	RENDERING USING A RADIANCE MAP	196
10.10	INTERACTION BETWEEN THE REAL AND VIRTUAL SCENES	196
10.10.1	Modeling the BRDF of the local scene	197
10.10.2	Differential Rendering	197
10.11	CODE MODULES	198
10.11.1	HDR Image API	198
10.11.2	HDR Image Code	199
10.11.3	Image Based Light API	201
10.11.4	Image Based Light Code	202
10.11.5	HDR Scene API	205
10.11.6	HDR Scene Code	206
10.11.7	Dome Path Tracing API	208
10.11.8	Dome Path Tracing Code	208
10.12	POLYSHADOW COLOR ADJUST PROGRAM	209
10.13	VISUAL EFFECTS PROGRAM	212
10.14	RESULTS	215
	<b>Bibliografia</b>	<b>219</b>
